

Fernando Tamayo

Software Developer

As a software developer with a master's degree in computer science, I bring a solid understanding of the software development life cycle and proficiency in multiple programming languages. My expertise extends to full-stack development, where I have successfully contributed to diverse projects, demonstrating versatility and the ability to work independently or as part of a team. While I excel in current technologies, I am also keen on expanding my knowledge, particularly in technologies like .Net, Java or Laravel to tackle challenging projects and continuously learn and grow alongside my front-end skills. With just under 2 years of hands-on experience in development and client interactions, I have honed strong interpersonal and problem-solving skills essential for collaborative project environments.
